

MZ3

The updated classic.

- Distinctive side ribs prevent water penetration, even in the strongest winds
- 28 mm adjustment range for optimum adjustment to suit batten spacing
- Effective water drainage and optimum flow behaviour, thanks to technically perfected overlapping
- First-rate raw materials ensure the smoothest tile surface
- Double bottom ribbing ensures the tile stays firmly in place and prevents blown snow or sleet from penetrating
- Improved water drainage thanks to optimised head interlock

TECHNICAL INFORMATION

- The technical drawing shown is merely an example.
- According to the Central Association of the German Roofing Trade (ZVDH) rules for verge tiles, the distance between the inner edge of the verge lug and the outer edge of the gable wall or cladding must be at least 1 cm.
- Current national rules and standards apply to the execution of roofing work. These vary from country to country (e.g. ZVDH Rules, Austrian Standards) and must be taken into consideration during execution. As manufacturer's information, CREATON-specific information about the execution of the sub-roof is also applicable and is complementary to these. You can find them in our Roof Planner or at www.creaton.de / www.creaton.at.
- Please consider the sample letter for the standard CREATON roof pitches.
